Checkboxes

The Checkbox is an input control to select one or more options. The option can be true, false, or indeterminate.

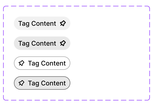

Radio Button

The Radio Button is an input control to select a single option from the list.

Tags

Tags represent a set of interactive, merchant-supplied keywords that help label, organize, and categorize objects.

Toggle

A toggle is used to view or switch between enabled or disabled states.

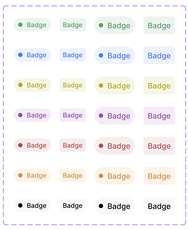

Pagination

Use pagination to let merchants move through an ordered collection of items that has been split into pages.

Badge

Badges are used to inform merchants of the status of an object or of an action that's been taken.

Label

Badges are used to inform merchants of the status of an object or of an action that's been taken.

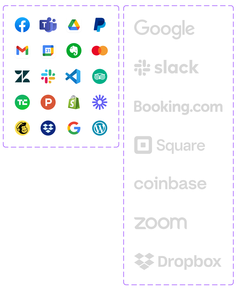

Country Flag

Badges are used to inform merchants of the status of an object or of an action that's been taken.

Logo

Badges are used to inform merchants of the status of an object or of an action that's been taken.

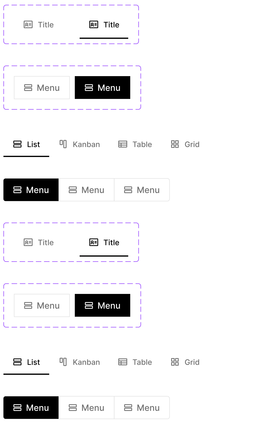

Avatar

Avatars are used to show a thumbnail representation of an individual or business in the interface.

Tabs

Tabs are used to organize content by grouping similar information on the same page.

Tabs
